Materiaalkunde Kenneth G. Budinski 2009 In Materiaalkunde komen alle belangrijke materialen die toegepast worden in werktuigbouwkundige constructies aan de orde, zoals metalen, kunststoffen en keramiek. Per materiaalgroep behandelen de auteurs: · de belangrijkste eigenschappen; · de manier van verwerking; · de beperkingen; · de belangrijkste keuzeaspecten met betrekking tot constructies; · de manier van specificatie in een technische tekening of een ontwerp. De eerste editie van Materiaalkunde verscheen alweer dertig jaar geleden. In de tussentijd is het voortdurend aangepast aan de nieuwste ontwikkelingen en het mag dan ook met recht een klassieker genoemd worden.

Handbook of Key Global Financial Markets, Institutions, and Infrastructure 2012-12-17

Understanding twenty-first century global financial integration requires a two-part background. The Handbook of Key Global Financial Markets, Institutions, and Infrastructure begins its description of how we created a financially-intergrated world by first examining the history of financial globalization, from Roman practices and Ottoman finance to Chinese standards, the beginnings of corporate practices, and the advent of efforts to safeguard financial stability. It then describes the architecture itself by analyzing its parts, such as markets, institutions, and infrastructure. The contributions of sovereign funds, auditing regulation, loan markets, property rights, compensation practices, Islamic finance, and others to the global architecture are closely examined. For those seeking substantial, authoritative descriptions and summaries, this volume will replace books, journals, and other information sources with a single, easy-to-use reference work. Substantial articles by top scholars sets this volume apart from other information sources

international perspectives result in new opportunities for analysis and research Rapidly developing subjects will interest readers well into the future

Consolidated Financial Reporting Paul Taylor 1996-05-25 Consolidated Financial Reporting introduces and examines what is currently the most central and controversial area in financial reporting. In an innovative and distinctive way the author integrates concepts, techniques, controversies and current practice. Techniques are introduced within a framework which shows why they work and what the figures mean. Controversial issues are grounded within modern accounting theory and practice. All core areas and relevant standards are covered including: acquisition and merger accounting; fair values at acquisition; goodwill; consolidated cash flow statements; reporting consolidated financial performance; foreign currency translation; segmental reporting; off-balance sheet financing; and related party transactions. The book is designed so that readers with particular interests - for example in technical matters or concepts and standards - can easily find their way through clearly marked sections. Discussion and calculation reinforce each other - calculations illustrate controversies, and controversies and concepts illustrate techniques. Examples are carefully graduated and care is taken not to obscure principles with unnecessarily complex calculations. Materials are set into an international context. The book is both rigorous and accessible. It is an extensive revision of and successor to the author's 1987 title Consolidated Financial Statements. Because of recent theoretical and institutional developments, an enormous amount of new material has been added and new teaching approaches to many areas included. There are many more worked examples and exercises as well as approachable discussions of 'state-of-the-art' advanced topics. The solutions notes for each case are available on a disk for instructors who recommend the book for course use.
